Lespedeza capitata

[World J Urol.](#) 2002 Nov;20(5):285-93. Epub 2002 Oct 17.

Botanical medicines for the urinary tract.

[Yarnell E.](#)

Abstract

Four important categories of urologic herbs, their history, and modern scientific investigations regarding them are reviewed. Botanical diuretics are discussed with a focus on *Solidago* spp (goldenrod) herb, *Levisticum officinale* (lovage) root, *Petroselinum crispus* (parsley) fruit, and *Urtica dioica* (stinging nettle) herb. Urinary antiseptic and anti-adhesion herbs, particularly *Arctostaphylos uva-ursi* (uva-ursi) leaf, *Juniperus* spp (juniper) leaf, and *Vaccinium macrocarpon* (cranberry) fruit are reviewed. The antinephrotoxic botanicals *Rheum palmatum* (Chinese rhubarb) root and **Lespedeza capitata** (round-head **lespedeza**) herb are surveyed, followed by herbs for symptoms of benign prostatic hyperplasia, most notably *Serenoa repens* (saw palmetto) fruit, *Urtica dioica* root, and *Prunus africana* (pygeum) bark.

[Flavonoids as medicines].

[Article in French]

[Brasseur T.](#)

Abstract

Although flavonoids have been used for a long time, many medical practitioners and pharmacists know very little about them. This article gives a few particulars of some flavonoids and plant extracts: rutin, water soluble derivatives of rutin, citroflavonoids, anthocyanins, procyanidins, silymarin, Ginkgo biloba, Chrysanthellum indicum and **Lespedeza capitata**.
